Introduction:

Sanad Charitable Association, is an association that provides services for children with autism, evaluating and rehabilitating children and providing psychological, speech, language and special education services.

Sanad Association has an integrated team of doctors and specialists in the rehabilitation of children with autism. Hand in hand, the staff helps children and develops learning and social communication skills with the aim of integrating children into public life and school life.

Our software assists the association in its work and facilitates their transactions. It displays full details of the children joining the association and information about the staff of the association. It enables the admin to add new children to the system or add new members to the staff, and provides a place to confirm reservations for treatment sessions for children. All this and more in one program.

The software also facilitates the process of booking appointments for parents of children, as the program shows them the available appointments, and the parents choose the appropriate date for them with ease.

Our goal with this software is to provide an integrated system for the association and the parents who use it, so that it provides them with an easy and comfortable user experience.

Project Requirement:

Our system keeps trace of children information's like child ID, name, birth date, date of registration in the association and we keep trace of his parent information's like parent ID, parent name, phone number and email address to contact with the parents.

Also, we keep trace of the staff information like employee ID, employee name, employee phone, employee email address and employee job title.

Also, we reserve the feedbacks from the parents.

We reserve the articles to display them on the home page so the visitors of the website can read more about autism.

We reserve in the system the free times (doctor id, time , and date) so the parents can book a suitable time for them.

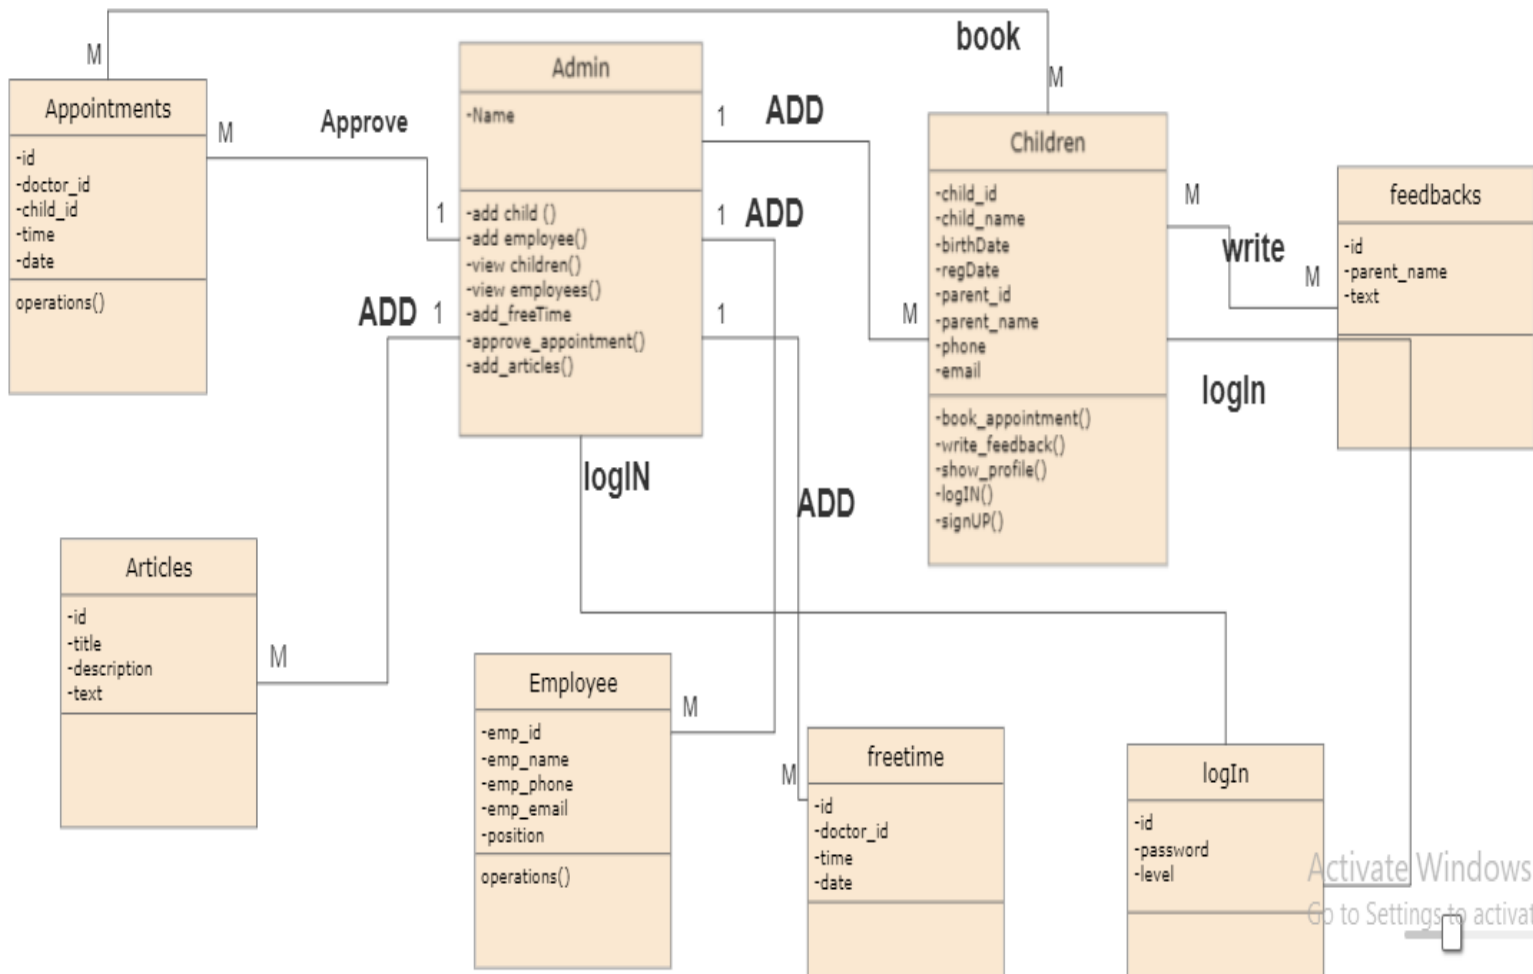

And we reserve the booked appointments by the parents (child id, doctor id, time, date).

Tools used in our software:

- PHP storm.
- XAMPP.
- Canva.
- Muzli colors.
- Bootstrap library.
- Chart.js
- Ajax.

What Is Autism

Autism is a developmental disorder with symptoms that appear within the first three years of life. Its formal diagnostic name is autism spectrum disorder. The word "spectrum" indicates that autism appears in different forms with varying levels of severity.

[Read More](#)

How autism is diagnosed

There is no known biological marker for autism. That means that no blood or genetic test can diagnose the disorder. Instead, clinicians rely on observation, medical histories, and questionnaires to determine whether an individual has autism. Physicians and specialists may use one or several of the following screening tools:

ABOUT US

We are a foundation that deal with children with autism and learning difficulties socially, academically, and psychologically through a school of their own. Integrating them into society, qualifying them professionally, so that they are not a burden on the family and society. Community awareness and education on how to deal with these two categories of children.

Log In page, this page to log in for admin or the user. It checks if the entered username and password if they are saved in database (log in table) to let the admin or user enter the system.

If the user hasn't an account, he should click on sign up to take him to sign up page. Since this system is specified for Sanad Charity Association so not any one can sign up. The should first the child to the system and its sends automatically an email to the parent that his child is added and he can use the system and sign up with the child id as username and set a password. So, this page first checks the children table to ensure that the child is registered and then add the login information to login table. If the child is not added to the system, it will prevent the sign up.
